

Maxell was the first company in Japan to successfully market button-type silver oxide batteries. Now Cornerstone can source Silver Oxide batteries of the same quality with much more competitive prices in China. Based on many years of experience and know-how in various fields of manufacturing batteries Cornerstone now sources the SR battery. The Silver Oxide is suitable for precision electronic devices such as quartz watches, where high-energy density per unit volume and a stable operating voltage are required. Various product lineups are available to meet the growing need for supplying power to various types of watches, micro/small appliances and various other electronic gizmos, ranging from large to compact, thin models. Zero-mercury, zero-lead added types are also available. For more information, please contact Cornerstone.
